

The ability of XM to provide an ever increasing catalog of services continues to make it a more viable alternative to the local big business radio. Much like satellite TV and the ability to view local news the local references are much more than convenience, but necessity of everyday living.

I don't see any rational to the NAB's petition other than an intention of stifling the competition. If that's the case I would perceive the NAB's efforts as unfair business practices and a true waste of my tax dollars.

Thank you for your time.
